During the first two years of the Soviet regime the situation hardly changed for the better. There was redistribution of the land in 1923-24, but the reform only partly cut down the amount of land used by the toyons and virtually made no difference to the burdensome state of the poor people. For example, the nonrepartitional land expropriated by the toyons on the basis of their "clearing right" was left in their possession. It was only the second land reform of 1929 that put an end to toyon coercion and created a situation in which the agriculture of Yakutiya could be improved. About 150,000 hectares of the best land, formerly owned by the toyons and kulaks, then passed into the hands of the working peasantry.

A collective-farm movement among the Yakut workers began in about 1930. In 1929 only 3.6 percent of the households were collectivized; by 1932 the figure was 41.7 percent, and by 1947 collective farms united 98.7 percent of all the households in the Yakut Republic. Collectivization gave a powerful impetus to the development of land cultivation, which prior to the Revolution had only advanced at a snail's pace. The sown area in Yakutiya had increased to 92,000 hectares by 1946, as opposed to 37,000 in 1917. Machine-tractor stations provide great assistance to the collective farms. Several hundred tractors, many combines and trucks are now at work in the fields. More than 20,000 agricultural machines are in operation. Trained teams of Yakut tractor-drivers, combine-operators, drivers and mechanics have begun to appear. Great advances have been made in the field of agricultural techniques. Particular attention has been given to retention of the moisture in the soil. The climate and soil conditions of Yakutiya make agriculture particularly difficult. In addition to the frequent droughts and spring frosts, some of the lakes dry up and deprive whole settlements of water. Over the last few years the Yakut collective farms have worked very hard to organize irrigation and flooding.

Many farms use water wheels and pumps to water their gardens. In 1952, more than 300,000 hectares of land, chiefly green meadows and pastureland, were irrigated by means of both permanent and temporary installations. The first specialized meadow-reclamation station had been set up in the Gorniy Rayon.

In 1952, M. G. Yegorov, member of the New Life collective farm in the Megino-Kangalasskiy Rayon, was awarded a Stalin Prize for the introduction of more modern methods in vegetable-growing on Yakutiyan collective farms. In the rigorous Yakutiyan climate Yegorov had been gathering 300-350 tsentners of cabbage, 180-190 tsentners of cucumbers, 170 tsentners of carrots, and 130 tsentners of tomatoes each year per hectare. In 1956 he was awarded the Order of Lenin.

Nevertheless, animal husbandry is still the chief branch of agriculture in Yakutiya. Poorly productive livestock was a legacy received by the collective farms from the past. The milk yield per cow averaged only 600 kilograms of milk per year. The Yakut farmers struggled hard for complete reorganization of their animal husbandry. The productivity of the cattle was improved throughout the Republic by crossbreeding. Techniques for the maintenance and pasturing of cattle were radically changed. Many standardized cattle-yards of an improved design were built. The work of the milkmaid was mechanized on many collective farms. On account of the extensive clearing of meadowland, the farms are in a position at the present time to provide their cattle with coarse fodder, although they still do not have enough concentrates.

An important part has been played in the development of animal husbandry by veterinary-zootechnical work. The rate of malignant anthrax among cattle has been reduced to nil. Precautionary measures in this

glass, tambours (extra doors with an air lock in between) and zavalinkas (mounds of earth around the house). A common practice is to ice over the house for the winter with a mixture of snow and water. Double ceilings, double floors, horizontal flues and shutters are still used, although rather rarely. The brick or tile stove is sometimes combined with the traditional Yakut fireplace. In many houses there is an extra iron stove in addition to the brick stove.

The internal appearance of dwellings has also changed. The furniture known before to the Yakuts (tables, stools and benches) has become less massive and more varied. We now find bookshelves, chairs, small dressing-tables and mirrors. Factory-made crockery and utensils are encountered in every home. Clocks (including alarm clocks), writing materials, and books have become common, and phonographs are also sometimes found. In most houses the walls are adorned with posters, pictures of Communist Party leaders, photographs, bookshelves, and over the bed there is usually a rug made of skin from the reindeer's head, bead-embroidered saddlecloths, or else the walls are covered with cloth. The windows have curtains.

Tremendous changes have taken place in the way of life of the Yakuts. Many collective farms now have electricity and radio. Clean clothes, hot baths, and attention to their personal appearance are typical of most of the collective-farm members. There has been a change in interests, habits and way of life. The outlook of the population has broadened. Books can now be found in every house. In the settlements people enjoy movies, and attend lectures and discussions in the reading rooms. Young people take part in ski-races, chess and other sporting events. Amateur song and dance groups in the clubs are usually of interest to the whole settlement. The families are no longer isolated and no longer keep to themselves.

A typical innovation for city children is toys, such as figures of horses and cows, rubber dolls, rattles, clockwork trucks, and so on. In addition to these, we commonly find delicately carved wooden animals and tiny bows and arrows. In the schools and boarding facilities children amuse themselves with the most popular table games. In the spring and summer they play various games, including hide-and-seek and blind man's-buff.

A great deal has changed in the Yakut diet, as well.

It should be remembered that before the Revolution Yakutiya was a country of chronic famine. Most of the Yakut population suffered from starvation every year, particularly at the end of the winter and in spring. Bread has now become a normal food not only in the southern but also in the northern areas. Groats and macaroni are now part of the staple diet. The consumption of vegetables and potatoes has also considerably increased.

In many regions the collective farms grow cucumbers, radishes, cabbages, onions and beets. Vegetables are imported in the dehydrated form. Everywhere the population is amply provided with tea, sugar, and tobacco. There are bakeries at trading points in most settlements. Meat and fish are consumed by the Yakuts in large quantities, particularly in the northern regions, where they are the staple diet. In the southern regions an important part of the diet is dairy products. On account of the overall improvement in the living standards of the people, sapwood is no longer consumed as food. Nor do they eat pickled fish any more. Local traditions are still retained in the cooking of dairy products, meat and fish. In the northern regions meat is commonly undercooked. Milk is made into some curious dishes such as suorat, khayakh, chokhoon, *кобугер* and so forth. In a number of regions reindeer gristle is still eaten in the raw state as a delicacy, and so are the liver and bone marrow of this animal. Many families eat freshly
